Statistics: Mean 43.195; Variance 65.893; scale 0.656

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Ţ	New human tissue inhibitor of metallo:proteinase-3 - used to
PΤ	develop prods. for diagnosis, therapy or prophylaxis of
PΤ	conditions with unwanted matrix metallo:proteinase activity.
PS	Disclosure; Fig 6A-B; 87pp; English.
ဂ္ဂ	The protein sequence of human TIMP-2 is compared with the cattle,
င္ပ	pig, human, rabbit and mouse TIMP-1, mouse and cattle TIMP-2, and
გ	chicken (Ch) and mouse TIMP-3. A probe based on the ChIMP-3
გ	amino acid sequence (R65000) is used to isolate DNA encoding
ဂ္ဂ	human TIMP-3 from a human cDNA library. Human TIMP-3 can be used
ဂ	for the diagnosis, therapy or prophylaxis of conditions
გ	characterized by excess or unwanted matrix metalloproteinase
င္ပ	activity, e.g. neoplasias, tumor metastasis, inflammatory
გ	disorders such as rheumatoid arthritis, ulcerations, reaction
င္ပ	to infection, periodontal disease or osteoporosis. It can also
ဌ	be used in drug screening/design.
SQ	Sequence 220 AA;

Claim 8; Fig 2; 65pp; English.

Q73088 encodes R62769 human metalloproteinase inhibitor (MI), may be used to inhibit tumour cell dissemination and for treat rheumatoid arthritis, dystrophic epidermolysis bullosa, emphys and osteoporosis. The DNA may be used to detect MI gene disord Sequence 220 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 12; Fig 2; 63pp; English.

The product has therapuetic use in inhibiting tumour dissemination during chemotherapy and radiation therapy, impurged bone marrow cell harvesting etc. The inhibitor may also be useful in encapsulating tumours aiding clean excision, and in treatment of enphysema, Paget disease, osteoporosis, scleroderma and bedsores.

The gene product also has application in autoimmune disorders eg. see also Q06583.

See also Q06583.
                                                                                                                                                                                                                                                                                                                                                                                                                      Bos
                                                                                                                                                                                                                                                                                                                                                                                                                                              emphysema;

A probe was synthesised based upon the protein sequence information. It was used to screer a LambdaGem-4 cDNA library prepared from human melanoma cells. 23% positives were identified from a total of 750,000 plaques screened further analysis and screening with additional probes eliminated most of the clones. Clone pSS38 was isolated and the nucleotide sequence of the cDNA insert was determined. The deduced amino acid sequencing the TIMP-2 protein.

Sequencing the TIMP-2 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           R06898

Metalloproteinase inhibitor TIMP-2.
matrix metalloproteinase inhibitor; TIMP-2 (CSC-21K).
Synthetic.
US7494796-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnosis, detection and purificn..

Disclosure; Fig 6A; 54pp; English.

TIMP-2 was isolated from human melanoma cell-conditioned media and the amino acid sequence determined. A probe was synthesised based upon the protein sequence information. It was used to screen a Lambdagem-4 cDNA library prepared from human melanoma cells. 239 positives were identified from a total of 750,000 plaques screened. Further analysis and screening with additional probes eliminated all but two clones (pSSIS and pSSIS). Both were sequenced and found to encode CSC-21K (~TIMP-2), a novel metalloproteinase inhibitor. This is the amino acid sequence deduced from the cDNA sequence of
New matrix metallo-proteinase inhibitor - used to treat diseases resulting from matrix metallo-proteinase activity and in diagnosis, detection and purificm.

Disclosure; Fig 5; 54pp; English.

Protein was isolated from human melanoma cell-conditioned media gelatin-affinity chromatography.

It inhibits matrix metalloproteinases and can be used to treat diseases such as arthritis, diabetes, cancer, ulcers of mucosa a epithelial tissues, autoimmune-mediated inflammation, lung injur
                                                                                                                                                                                                                                                                                                                                                   R06895;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New matrix metallo-proteinase inhibitor - used to treat diseases resulting from matrix metallo-proteinase activity and in

TIMP-2 was isolated from human melanoma cell-conditioned media and the amino acid sequence determined. A probe was synthesised based upon the protein sequence information. It was used to screen a LambdaGem-4 cDNA library prepared from human melanoma cells. 239 positives were identified from a total of 750,000 plaques screened. Further analysis and screening with additional probes eliminated all but two clones (pSS15 and pSS18). Both were sequenced and found to encode CSC-21K (-TIMP-2), a novel metalloproteinase inhibitor. This is the amino acid sequence deduced from the cDNA sequence of
                                                                                                                                                                                                                                                             pss18.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          growth, osteoarthritis, osteoporosis, pulmonary emphysema, periodontal disease and rheumatoid arthritis, and for contraception. TIMP-4 cDNA can be used for gene therapy of such disorders and in diagnostic assays for TIMP-4 mRNA in cells and tissues. Oligonucleotide fragments of the TIMP-4 cDNA and antagonists or inhibitors of TIMP-4 can be used to treat disorders associated with over-expression of TIMP-4, e.g. to promote healing of corneal and diabetic ulcers and ulcers/lesions caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding a tissue inhibitor of metallo:proteinase(s), TIMP-4 for production of recombinant protein for treating tumours, arthritis, etc., and for contraception claim 1; Fig 1; 24pp; English.

This sequence is a tissue inhibitor of metalloproteinases designated TIMP-4. The CDNA clone was identified with Incyte Clone No. 589345.

TIMP-4 can be used to treat disorders associated with excessive metalloprotease expression, e.g. tumour metastasis, angiogenesis and metalloprotease expression, e.g. tumour metalloprotease expression e.g. tumour metallop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-JUL-1997.

It can be used to treat patients in need of TIMP-4 (e.g. cancer, arthritic diseases, bone resportion diseases, Paget's disease, hyperparathyroidism and cholesteatoma), and to screen for antagonists useful for treating patients in need of TIMP-4 inhibition (e.g. for tissue repair and remodeling). It can also be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diseases, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a fusion protein between the human TIMP-1 and TIMP-3 proteins. This sequence was used to test the specificity of the monoclonal antibody (MAD) of the invention. The MAD of the invention reacts specifically with human TIMP-3 (see W30308), by specific recognition of the TIMP-3 fragments represented by W30305-W30307. The MAD can be used in the study or diagnosis of TIMP-3-mediated diseases, particularly for the detection of malignant tumour cells, or the diagnosis of progressiveness of cancers. They can also be used in the establishing an immunoassay for TIMP-3 or its equivalent transformed cells can be used for producing TIMP-3 or its equivalent proteins on a large scale. The immunoassay method for TIMP-3 the MADs is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human TIMP-3 and anti-human TIMP-3 monoclonal antibodies - used diagnosis of TIMP-3 mediated diseases, especially the detection malignant tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09-SEP-1997.

New human tissue inhibitor of metallo:proteinase-3 - used to develop prods. for diagnosis, therapy or prophylaxis of conditions with unwanted matrix metallo:proteinase activity. Disclosure: Fig 11: 87pp; English.

Human TIMP-3 can be used for the diagnosis, therapy or prophylaxis of conditions characterized by excess or unwanted matrix metalloproteinase activity, e.g. neoplasias, tumor metastasis, inflammatory disorders such as rheumatoid arthritis, ulcerations, reaction to infection, periodontal disease or osteoporosis. It can also be used in drug screening/design.
